27 Modules Dimensions:

W 43 1/2 x H 41 3/8 x D 18"

30 Modules Dimensions:

W 43 1/4 x H 45 x D 18"

Materials

The StorSystem "Mobile Series" metal cart frames are constructed from 16 gauge, 1" square welded steel tubing with an epoxy powder coated finish. The top panel is constructed from 18 gauge formed steel, epoxy powder coated sheets securely anchored to the metal frames with machine screw fasteners. All mobile series metal carts have four, 3-inch heavy-duty rubber tire casters permitting ease of movement throughout environments.

The "shatterproof" tote tray structural Runners are molded from Acrylonitrile Butadiene Styrene (ABS) Plastic. These runners are secured to the steel frames with 1/4" tap screws. All cart solutions incorporate the patented Glide & Tilt Tote Tray Runner System. This innovative system is specifically designed to allow the accompanying ABS tote trays to stop in an angled open position without falling out of the unit, making for easy access and viewing.

Shatterproof Tote Trays, also constructed from ABS, provide the most flexibility in a three-tiered approach to holistic educational environments. All tote trays are uniquely designed with internal radius corners, which ease cleaning. Each tote tray is provided with an ABS ticket window labeling system as well as the "E-Z panel" for large adhesive labels, which can be easily applied and removed.

The 12" wide by 16-3/4" long Slim Line ABS Plastic Tote Trays are available in four different depths: 3", 6", 9" and 12".

Every component within the StorSystem product line is extremely agile. StorSystem Mobile Series provides storage solutions for small or large spaces designed with the ability to easily be reorganized, repositioned, reconfigured and re-purposed throughout an entire facility.

Accessories/Enhancement Options

Optional StorTray Tote Tray Inserts are available in 5 different and unique configurations providing ideal opportunities for the smallest of organizational needs. All tote tray inserts fit securely within all sizes of tote trays. When utilizing trays of 6 inches in depth or more, items can be stored beneath the StorTray Inserts. Crystal clear see-through Lids, also manufactured using shatterproof ABS plastic, secure the contents of tote trays providing secure transportation opportunities. The unique and innovative lid design resists moisture and dust infiltration within the tote tray. Carts can be provided with optional end and back panels with the additional option of a standard pegboard and or flush design providing writable as well as magnetic surface solutions.
